

On 6/1/15 The OSC, EPA ERT and SERAS contractors mobed to the Site to continue work on "J" lower. The work involved ventilation on the unit with high velocity fans, heating the unit to above 100 degrees and the use of carbon absorption units. A 24-hour sampling event was conducted in "J" lower on 6/5-6. Additional Summa grab samples were also taken during the week of 6/1/15. The results from the latest round of 24 hour Summa samples reveal a Methyl Bromide concentration in the lower unit of "J" ranging from 0.37ppbv to 0.541ppbv. These results represent values which are under the Reference Concentration for Methyl Bromide (RfC) of 1.3 ppbv. It is expected that the 1.3 RfC is the value that VIDOH and VIDPNR will use as the clearance level for the condo unit.

On 5/1 RPB participated on a conference call with representatives from ATSDR, VI DPNR and VI DOH, to discuss using the RfC of 1.3 ppbv as the clearance value for the Siranusa units. The discussion involved an explanation by ATSDR as to how the RfC was derived. DOH and DPNR have indicated that they intend on using 1.3 ppbv as the clearance value for the units. The ultimate decision to clear the individual units will be a joint decision between DOH and DPNR.

The REOC continues working with EPA Pesticides and Toxic Substances Branch to evaluate options for management of existing stocks of the fumigant. Stocks of Methyl Bromide have been identified at facilities on St. Thomas and St. Croix, consisting of one cylinder at each of two facilities. On 4/30 CID completed over-packing of the cylinders on both St. Thomas and St. Croix. CID/DOJ are currently arranging for the transport of the containers off island.

Resources on-site. 1 OSC, 1 EPA ERT, 2 SERAS Contractors. As the latest sample results show levels in both "J" units as being under 1.3ppbv, ERT and SERAS are demobing all personnel and equipment from the Site.

R2 REOC remains the point of contact for all EPA's activities related to this incident.

EPA is still working cooperatively with DPNR, EPA CID, DOJ, ATSDR, USVI DOH and the condo complex management company.
